**FIRST SUPPLEMENTARY INFORMATION DISCLOSURE STATEMENT**

Hon. Commissioner of Patents and Trademarks  
P.O. Box 1450  
Alexandria, VA 22313-1450

Sir:

Applicants respectfully direct the attention of the Examiner to additional art cited with respect to the present application.

The Examiner is respectfully requested to review and consider this art, in accordance with MPEP 2001.06, MPEP 1893.03(e) and MPEP 1893.03(g) and to indicate in the first office action that he has considered this art. Additionally, the Examiner is respectfully requested to cite those prior art publications mentioned in this application which the Examiner considers to be material or relevant to the present claims.

Further, in order to comply with discretionary regulations 37 C.F.R. §1.97 and §1.98, attached is an Equivalent to Form PTO-1449 listing the cited art. Also attached are copies<sup>1</sup> of the art. This art contains information which the Examiner may consider to be important in deciding whether to allow the present application to issue as a patent.

Applicants wish to point out that items 1-4 were cited in a Supplementary Partial European Search Report of a corresponding EP Application No. 99925253.9. Copies of these items are attached hereto.

<sup>1</sup> To the extent that a document is listed and no copy of same is attached, then such document is not at the present time available to the undersigned or is available in the national stage file. If a listed document is not in the English language and an English translation is readily available, such translation is also attached; if translation is not attached, it is not readily available to the undersigned. If a foreign language patent document is cited, and an English language equivalent is known to the undersigned, then such an equivalent patent is also cited on the attached form along with the corresponding foreign language patent and a connecting arrow indicated therebetween; if no such English language equivalent is cited then none is known to the undersigned.

In accordance with MPEP Section 609 it is requested that each document cited [including any mentioned in Applicants' specification which is not repeated on the attached {or prior) PTO-1449 form(s) or equivalent(s) thereof] be given thorough consideration and be cited of record in the prosecution history of the present application by initialing on the PTO-1449 form or its equivalent, so that it will appear on the face of the patent issuing on the present application, even if the Examiner does not consider it sufficiently pertinent to use in a rejection, or otherwise does not believe that the guidelines for citation have been fully complied with.

The present Information Disclosure Statement is being submitted in compliance with 37 C.F.R. §1.56 as an Examiner might consider any cited document important in deciding whether to allow the application to issue as a patent, but the citation of each document is not to be construed as an admission that such document is necessarily relevant or prior art. No representation is intended that the cited documents represent the results of a complete search, and it is anticipated that the Examiner in the normal course of examination, will make an independent search and will determine the best prior art consistent with 37 C.F.R. §1.104(a), and in the course of such search will review for relevance every document cited on the attached form.

Early and favorable consideration is earnestly solicited.

Respectfully submitted,  
Adi BALAN et al.

## COMMUNICATION

! supplementary

The European Patent Office herewith transmits the partial European search report under Rule 46(1) EPC relating to the above-mentioned European patent application.

Copies of the documents cited in the search report are enclosed.

The applicant's attention is drawn to the following:

The search Division informs the applicant that if the European search report is also to cover inventions other than the invention first mentioned in the claims, a further search fee must be paid for each of these inventions, within ONE MONTH after notification of this communication.

If the application has been filed up to 30 June 1999, the search fee in force before 01 July 1999 (EUR 869,-) or the equivalent applicable on the date of payment is payable.

**This applies also to the search fees requested under Rule 46(1) EPC.**

See also OJ EPO 06/1999, 405.

☐ The abstract was modified by the Search Division and the definitive text is attached to the present communication.

☐ Additional set(s) of copies of the documents cited in the European search report is (are) enclosed as well.

### Note to users of the automatic debiting procedure:

Unless the EPO receives prior instructions to the contrary, the search fee(s) will be debited on the last day of the period for payment. For further details see the Arrangements for the automatic debiting procedure, Supplement to OJ EPO 02/1999.

			TECHNICAL FIELDS SEARCHED (Int.Cl.7)

The Search Division considers that the present European patent application does not comply with the requirements of unity of invention and relates to several inventions or groups of inventions, namely:

1. Claims: 1-6, 24

An apparatus for producing a nuclear medicine image of a subject, comprising: acquiring nuclear imaging data suitable to produce a nuclear tomographic image, the nuclear image data being acquired by a gamma camera head rotating about the subject, acquiring x-ray imaging data suitable to produce an x-ray tomographic image for attenuation correction of the gamma camera image, the X-ray imaging data being acquired by detectors irradiated by an X-ray source rotating around the subject for a plurality of rotations, averaging x-ray imaging data of a same view taken at different rotations of the X-ray source to produce averaged X-ray imaging data, reconstructing an attenuation corrected nuclear medicine image utilizing the nuclear imaging data and the averaged x-ray imaging data. The apparatus foresees also either the movement gated NM imaging mode or the cardiac gated NM imaging mode.

2. Claims: 7,8

A nuclear medicine camera having an X-ray imaging capability, having at least one gamma camera mounted on a gantry, an X-ray CT imager mounted on the same gantry, wherein the at least one gamma camera and the X-ray imager are capable of simultaneously rotating about a common axis at different rotation rates.

3. Claims: 9-21

A method of nuclear imaging, including acquiring attenuation data for correcting the nuclear image, comprising: acquiring nuclear emission data over a first axially extending portion of the body, determining an extent of a radioactive region of interest in the body, and acquiring transmission data over a second axially extending portion of the body, responsive to the determined extent.

4. Claims: 22, 23

A method of producing a nuclear medicine image of a subject, comprising: acquiring nuclear imaging data suitable to produce a nuclear tomographic image, the nuclear image data being acquired by a gamma camera head rotating about the subject, acquiring x-ray imaging data suitable to produce an x-ray tomographic image for attenuation correction of the gamma camera image, the X-ray imaging data being acquired by detectors irradiated by an X-ray source rotating around the subject, reducing the sensitivity of gamma camera head while the X-rays are produced, reconstructing an attenuation corrected nuclear medicine image utilizing the nuclear

The Search Division considers that the present European patent application does not comply with the requirements of unity of invention and relates to several inventions or groups of inventions, namely:

imaging data and x-ray imaging data.

5. Claims: 26-35

Apparatus for producing a nuclear medicine image of a subject comprising: at least one gamma camera having at least one detector mounted on a gantry and capable of rotating about an axis and of acquiring nuclear imaging data suitable to produce a nuclear tomographic image, a CT X-ray imager including an X-ray source, mounted on the gantry, and capable of rotating about the axis and X-ray detectors separate from detectors of the gamma camera, acquiring X-ray imaging data suitable to produce an X-ray tomographic image for attenuation correction of the gamma camera image, and circuitry capable of reconstructing an attenuation corrected nuclear medicine image utilizing the nuclear imaging data and X-ray imaging data, the CT X-ray imager having a capability of producing a CT image having an RMS noise level of about 10 Hounsfield numbers or a resolution of about 2 lp/cm.

6. Claim : 25

Apparatus for producing attenuation corrected nuclear medicine images of patients, comprising: a plurality of gamma camera heads that acquire nuclear image data suitable to produce a nuclear tomographic image at a plurality of positions about an axis, at least one X-ray CT imager that acquires X-ray data suitable to produce an attenuation image for correction of the nuclear tomographic image at a plurality of positions about and axis, the X-ray CT imager comprising a stationary anode X-ray tube.

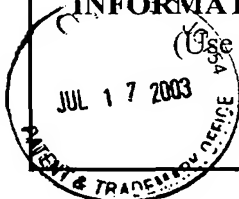

**ANNEX TO THE EUROPEAN SEARCH REPORT  
ON EUROPEAN PATENT APPLICATION NO.**

EP 99 92 5253

This annex lists the patent family members relating to the patent documents cited in the above-mentioned European search report. The members are as contained in the European Patent Office EDP file on  
The European Patent Office is in no way liable for these particulars which are merely given for the purpose of information.
